

Running a Competition

Para Athletics — operational guide

para-athletics.onrender.com

August 2026

Read this first

Enter everything on the live site, never on your own computer. The two hold separate data.

Never run git push while a competition is running — it replaces the live results with the copy on your laptop.

The first page of the day can take up to a minute to appear. That is normal; the site sleeps when nobody is using it.

What is in this guide

Part 1 covers the weeks before, when you set the competition up. Part 2 is the day itself. Part 3 is afterwards. Part 4 is a single page you can keep beside you.

Part	When	What it covers
1. Setting up	Weeks before	Competition details, events, athletes, entries
2. On the day	Competition day	Start lists, recording marks, making results official
3. Afterwards	That evening	Medals, the booklet, keeping a copy
4. Quick reference	At the desk	Addresses, what each page is for, common problems

Part 1 — Setting up

Do all of this in the weeks before. None of it is urgent on the day, and doing it early leaves you free to run the meet.

Step 1 — Log in

Everything starts here. One address, one password.

<https://para-athletics.onrender.com/login.html>

Type the password and you are taken to the Admin page. You stay logged in for 12 hours, so once in the morning is enough for a whole day.

You never need to put the password in the address any more. If a page ever sends you back to the login screen, it simply means your 12 hours ran out.

Step 2 — Enter the competition details

Open the Competition Details page. There is a link to it in the row along the top of the Admin page.

<https://para-athletics.onrender.com/competition.html>

Fill in the competition name, venue, city and dates. The organiser, contact and notes are optional.

These appear at the top of every public page, on every printed start list, and on the result booklet — so it is worth getting them right once. A box at the foot of the page shows exactly how the heading will look on a printed sheet before you save.

Set this before the competition and you need not come back to it.

Step 3 — Create the events

Still on the Admin page. Scroll down past the row of navigation links — the form is the second card, titled Add Event. It is easy to miss because the links above it fill the screen.

1. Event Name — write it as you would on paper, for example "Men's Shot Put F32-34". The name is yours to choose; nothing has to match it.
2. Discipline — choose from the list.
3. Gender and Day.
4. Classes — tick every class that competes together in this event.
5. Press Add Event.

The classes decide how the event is scored

Tick ONE class and the event is ranked on the performance itself — fastest time, longest throw.

Tick TWO OR MORE and it becomes a combined event, ranked on official World Para Athletics Raza points.

A line under the tick boxes tells you which you have built, so you can see it before pressing Add.

Classes with no points published for that discipline are greyed out. Choose Shot Put and T11 fades, because there is no shot put scoring for it.

Step 4 — Get the athletes in

There are three ways. Use whichever suits the situation.

Way	Where	Best for
Send clubs the template	Athlete_Entry_Template.xlsx	The main squad, weeks ahead
Paste a spreadsheet	Athletes page → Import	Getting those squads into the app
Add one athlete	Athletes page → Add One Athlete	A late entry on the day

The template has dropdowns for club, gender, class and events, so a team manager cannot mistype any of them. Only the classes World Para Athletics actually publishes are offered.

To import: open the sheet, select the rows including the heading row, copy, and paste into the box on the Athletes page. The columns can be in any order — the headings are read.

Two things the import does for you

Events are matched by discipline, class and gender. The sheet says "Shot Put" and the app finds your "Men's Shot Put F32-34" by itself. Team managers never need to know how you have named things.

Year of Birth sets the age category on its own. Under 20 is Youth. You never tick a Youth box.

Step 5 — Check the entries

Open the Entries page, pick each event in turn, and confirm the right athletes are in it. Add anyone missing from the athlete list on the same page.

Each athlete shows an OPEN or YOUTH badge. If a badge looks wrong, it is because the year of birth is wrong or missing — fix it on the Age Groups page and the badge follows.

Part 2 — On the day

Before the first event

6. Log in at `/login.html`.
7. Open the Print Start Lists page.
8. Choose an event, or leave it on All events to print the whole competition at once.
9. Press Print. It is set up as A4 landscape, one event per page.
10. Hand the sheets to the referees.

The sheets carry the athletes, bibs, clubs, classes and age categories already filled in. Everything the referee writes — lanes, marks, attempts — is left blank. Each sheet has three spare lines for late entries.

Field sheets have a Sector box, since that is decided per session rather than stored with the event. Type it in before printing.

Recording the marks

As each event finishes, the referee brings you the paper. Open the Results Entry page, choose the event, and type the marks in.

- Track: type the time as 11.45, or 2:05.43 for longer races.
- Field: type each attempt. The best is worked out for you.
- Type DNS, DNF or DQ where needed.
- Press Save when the event is done.

Correcting a mark

Just type the new value over the old one and save again. The results follow immediately.

Points recalculate by themselves. You never work them out by hand.

Making an event official

When you are satisfied with an event, mark it Official. Two things happen: the public results show it as confirmed, and its medals start counting towards the standings.

Nothing counts towards medals until you do this, so an event you are still checking cannot affect the table by accident.

What the public sees

These pages need no password. Share them freely, or put one on a screen.

Page	Address	Use
Schedule	<code>/</code>	What is on, and when
Live results	<code>/live.html</code>	Results as they come in
Medals	<code>/medals.html</code>	Standings by club
Athletes	<code>/athletes-public.html</code>	Who is competing
Mobile	<code>/mobile.html</code>	For spectators on phones
Scoreboard	<code>/display-rotation.html</code>	For a projector or big screen

These update by themselves within about three seconds of you pressing Save. Nobody needs to refresh anything.

Leaving a display page open on a screen has a useful side effect: it keeps the site awake, so nobody meets the slow first load.

Part 3 — Afterwards

Check the medals

Open the Medals page. It counts first, second and third from every event you marked Official.

Where an event held both Youth and Open athletes, each group has its own first, second and third — so six medals from one race. That is deliberate: the two point tables are not on the same scale, so ranking across them would let a slower youth athlete beat a faster adult.

Print the booklet

The Result Booklet page gathers everything into one document. Press Print, then choose Save as PDF as the destination if you want a file rather than paper.

Keep your own copy

Your results live in files on the hosting service, which are not a permanent record.

On the evening of the competition, save the booklet as a PDF and keep it somewhere of your own.

That takes two minutes and means the competition exists independently of the app.

Before the next competition

- Check paralympic.org for a newer Raza points table. The one in the app is dated 31 January 2025.
- Spot-check two or three combined-class results against WPA's own calculator, so you have seen the numbers agree with your own eyes.
- Clear the old competition when you are ready to start the next one.

Part 4 — Quick reference

Keep this page beside you on the day.

Your pages

Page	What you do there
/login.html	Start here every day
/admin.html	Create events
/competition.html	Competition name, venue and dates
/athletes.html	Import a spreadsheet, add one athlete
/entries.html	Put athletes into events
/startlists-results.html	Type in the marks
/print-startlists.html	Print blank sheets for referees
/age-groups.html	Years of birth, Youth and Open
/youth.html	Set a whole event to Youth or Open
/cleanup.html	Clear leftover entries if names look wrong

If something looks wrong

What you see	What it means
Sent to the login page	Your 12 hours ran out. Log in again.
A page looks out of date	Press Ctrl+F5 to force a fresh copy.
First page is very slow	The site was asleep. Normal, once a day.
An athlete shows as Unknown	A leftover entry. Open /cleanup.html.
Points look far too low	The event is scored as Open but should be Youth.
A class shows no points	WPA publishes none for that class and discipline.
A form seems missing	Scroll down, or press Ctrl+F and search for it.

The three rules

- 1. Enter everything on the live site.** Your own computer holds different data. Work typed there never reaches the site.
- 2. Never push during a competition.** A push replaces the live results with the copy on your laptop. Push between meets only.
- 3. Save the booklet as a PDF that evening.** It is your only permanent record.

How the age category works

Youth means under 20, taken from the YEAR of birth as is normal in athletics.

Through all of 2026 that means born 2007 or later, whatever month the birthday falls in. The boundary moves on by itself each January.

Enter a year of birth once and you never tick a Youth box. Where one event holds both groups, they are ranked separately, each with their own medals.
